

## Patient 1 Pre and Post Provocation Case Study

Case history dictated by attending physician

Provocation agents: ACZ nano/ACS 200

Female, 53. Dx: Fatigue, Hormone Imbalance, Weight gain; Chelation Hx: 2004 - DMPS IV X3

**Treatment response:** Continuing TID with ACZ nano (15 sprays) & ACS 200 (10 sprays), Bio-identical Tx with 7-keto DHEA, Progesterone and Liothyronine (T3). Energy improved & weight normalized.

**Results of 12 Hour Post-Provocation Testing:** Results demonstrate an increased excretion rate of **Mercury 5400%, Nickel 600%, Tin 600%, Lead 500%, Antimony 400%, Gadolinium 400%, Barium 350%, Aluminum 187%, Arsenic 157%, Other Metals Excreted Above Baseline: Cadmium, Cesium, Rubidium, Thallium** over Pre-Provocation levels.

### 12 Hour - Toxic Element Provocation Protocol (TEPP):

8am - collect Pre-Provocation urine sample, begin Provocation testing: 40 sprays ACZ nano and 20 sprays ACS 200 orally at 8am, 2pm, 4pm. Collect Post-Provocation urine from 8am until 8pm.
